

Title: Software Engineer

Work Location: Crystal City, Arlington, VA

Description:

Plans, conducts, and coordinates software development activities. Designs, develops, documents, tests, and debugs software that contains logical and mathematical solutions to business/mission problems or questions in computer language for solutions by means of data processing equipment. Applies the appropriate standards, processes, procedures, and tools throughout the development lifecycle. Applies knowledge of computer hardware and software, subject matter to be programmed in business/mission applications, information processing techniques used, and information gathered from system users to develop software. Corrects program errors, prepares operating instructions, compiles documentation of program development, and analyzes system capabilities to resolve questions of program intent, output requirements, input data acquisition, programming techniques, and controls. Ensures software standards are met.

Qualifications:

Experience in developing new software from user defined specifications, as well as maintain and enhance existing code provided by previous developers. Must have hands-on experience using C#, Java, Java Script, Java Beans, Spring, Hibernate and creating applets, in support of a Java-based user interface. Must have experience developing in an n-tiered software environment, passing data between multiple layers between the interface and the Oracle database. Oracle OID and/or LDAP experience helpful. XML experience helpful.

Requires a Top Secret Clearance
